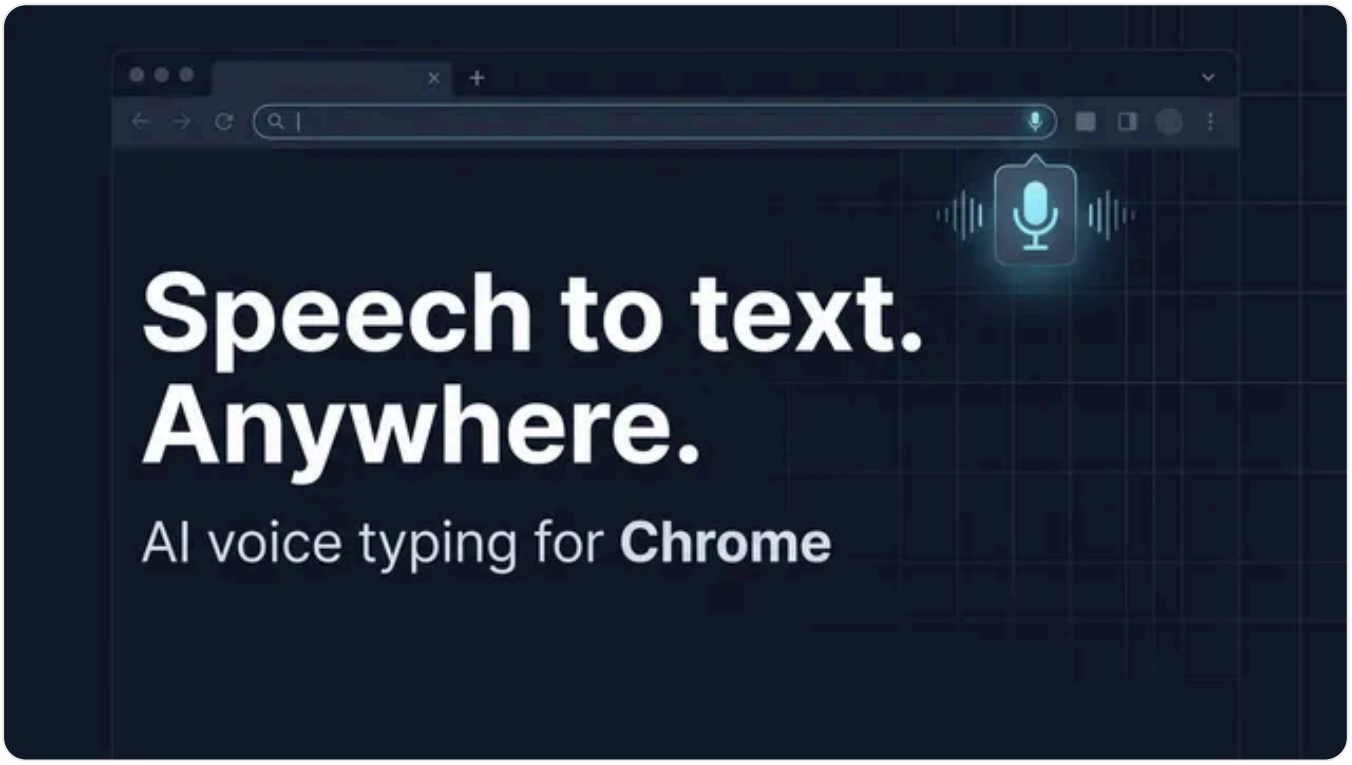
Whisper AI

Chrome extension for speech-to-text, AI voice typing, and transcript cleanup.



About

Whisper AI is a speech to text Chrome extension built for fast AI voice typing on any website. It lets you dictate into focused inputs, clean up transcripts, and switch between modes for translation, email drafting, and grammar fixes without leaving the page. The extension is designed for people who write a lot and want voice input that feels native in the browser.

What is Whisper AI

Whisper AI is a speech to text and voice typing Chrome extension that helps you turn spoken words into editable text while you work in the browser. It is made for fast AI voice

jumping through copy-paste steps. The app also supports transcript capture, voice notes, and smart cleanup, which makes the speech to text output more usable than raw transcription alone.

In practice, Whisper AI sits in your browser and acts like a voice-first writing tool. You can use it for quick notes, drafting messages, or converting audio to text with fewer cleanup steps afterward. The product description emphasizes that it works on any site where an input is focused, which makes the speech to text workflow feel close to native typing.

Key features

Whisper AI centers on AI voice typing, but it bundles several features that make the speech to text flow more flexible:

- Works as a Chrome extension, so it lives inside your browser workflow.
- Supports speech to text on any website with a focused input.
- Includes smart cleanup that removes disfluencies, adds punctuation, and fixes obvious ASR mistakes while preserving meaning.
- Offers 25+ languages, which helps with bilingual work and international teams.
- Provides hotkeys and hold-to-talk controls for faster recording.
- Includes modes for transcribing, translating, drafting emails, and grammar fixes.
- Lets you enable or disable the tool by site, so you can control where the voice typing experience is active.
- Captures transcripts and voice notes for later use.

The app's value is not just transcription speed. Its speech to text output is meant to be usable immediately, which matters if you rely on AI voice typing for emails, notes, or quick edits inside browser-based tools.

How to use it

Getting started with Whisper AI is straightforward, and the onboarding flow is built around using speech to text quickly.

- Install the Chrome extension and pin it for easy access.

Open any website with a text field and focus the input.

Start voice typing by clicking the floating microphone or using the hotkey.

Speak normally, then stop recording when you are done.

Pick a mode if you want translation, email drafting, or grammar cleanup instead of plain transcription.

Adjust site controls if you want the speech to text feature enabled only on selected pages.

The workflow is simple on purpose. Whisper AI is built to reduce friction, so you can move from speech to text in a few steps rather than switching to a separate transcription app.

Who it is for

Whisper AI is aimed at creators, operators, and anyone who writes often in the browser. It is especially useful if you want AI voice typing for faster drafting, or if you need speech to text for tasks that happen across many different websites.

Typical use cases include:

Drafting emails and replies faster.

Turning rough spoken ideas into clean text.

Capturing voice notes without leaving the page.

Translating or rewriting text while you work.

Filling forms or focused inputs by voice.

It also fits bilingual users and international teams because it supports 25+ languages and includes translation mode. If your work already happens in Chrome and most of your writing lives in browser tabs, the speech to text workflow is a natural fit.

What to know before you use it

Whisper AI is useful, but it is not a universal replacement for careful review. Its smart cleanup can fix obvious speech to text issues, yet it still depends on audio quality, accents, and the limits of automatic speech recognition. If accuracy is critical, you

A few practical caveats matter:

- It is a Chrome extension, so it is not presented here as a native desktop or mobile app.
- The source material does not mention offline use, audio file upload, or enterprise admin tools.
- The app says it works on any website, but results still depend on whether the target input is focused and compatible with browser extension behavior.
- Translation, email drafting, and grammar fixes are modes, not guarantees of perfect output.
- For legal, medical, compliance, or official records, use an approved transcription process or verify against the original audio.

If you want a browser-based speech to text tool for quick dictation and cleanup, Whisper AI is a practical option. If you need formal transcription accuracy or official documentation, treat the output as a draft and verify it carefully. Whisper AI works best as a fast speech to text companion for everyday browser writing, not as a substitute for a certified record.
